

Module 22

Partha Pratim
Das

Objectives &
Outline

Inheritance in
C++

Data Members
Overrides and
Overloads

Summary

Module 22: Programming in C++

Inheritance: Part 2

Partha Pratim Das

Department of Computer Science and Engineering
Indian Institute of Technology, Kharagpur

ppd@cse.iitkgp.ernet.in

Tanwi Mallick
Srijoni Majumdar
Himadri B G S Bhuyan

Module Objectives

Module 22

Partha Pratim
Das

Objectives & Outline

Inheritance in
C++

Data Members
Overrides and
Overloads

Summary

- Understand how inheritance impacts data members and member functions
- Introduce overriding of member function and its interactions with overloading

Module Outline

Module 22

Partha Pratim
Das

Objectives &
Outline

Inheritance in
C++

Data Members
Overrides and
Overloads

Summary

- ISA Relationship
- Inheritance in C++
 - Semantics
 - Data Members and Object Layout
 - Member Functions
 - Overriding
 - Overloading
 - protected Access
 - Constructor & Destructor
 - Object Lifetime
- Example – Phone Hierarchy
- Inheritance in C++ (private)
 - Implemented-As Semantics

Inheritance in C++: Semantics

Module 22

Partha Pratim Das

Objectives & Outline

Inheritance in C++

Data Members
Overrides and Overloads

Summary

- **Derived ISA Base**
- Data Members
 - **Derived** class *inherits* all data members of **Base** class
 - **Derived** class may *add* data members of its own
- Member Functions
 - **Derived** class *inherits* all member functions of **Base** class
 - **Derived** class may *override* a member function of **Base** class by *redefining* it with the *same signature*
 - **Derived** class may *overload* a member function of **Base** class by *redefining* it with the *same name*; but *different signature*
- Access Specification
 - **Derived** class *cannot access private* members of **Base** class
 - **Derived** class *can access protected* members of **Base** class
- Construction-Destruction
 - A *constructor* of the **Derived** class *must first* call a *constructor* of the **Base** class to construct the **Base** class instance of the **Derived** class
 - The *destructor* of the **Derived** class *must* call the *destructor* of the **Base** class to destruct the **Base** class instance of the **Derived** class

Inheritance in C++:

Data Members and Object Layout

Module 22

Partha Pratim
Das

Objectives &
Outline

Inheritance in
C++

Data Members
Overrides and
Overloads

Summary

- **Derived ISA Base**
- Data Members
 - **Derived** class *inherits* all data members of **Base** class
 - **Derived** class may *add* data members of its own
- Object Layout
 - **Derived** class *layout* contains an instance of the **Base** class
 - Further, **Derived** class *layout* will have data members of its own
 - C++ does not guarantee the *relative position* of the **Base** class instance and **Derived** class members

Inheritance in C++:

Data Members and Object Layout

Module 22

Partha Pratim
Das

Objectives &
Outline

Inheritance in
C++

Data Members
Overrides and
Overloads

Summary

```
class B { // Base Class
    int data1B_;
public:
    int data2B_;
    // ...
};

class D: public B { // Derived Class
    // Inherits B::data1B_
    // Inherits B::data2B_
    int infoD_; // Adds D::infoD_
public:
    / ...
};

B b;

D d;
```

Object Layout

Object b

Object d

d cannot access data1B_ even though data_ is a part of it!
d can access data2B_

Worksheet

Module 22

Partha Pratim
Das

Objectives &
Outline

Inheritance in
C++

Data Members
Overrides and
Overloads

Summary

NPTEL

Inheritance in C++:

Member Functions – Overrides and Overloads

Module 22

Partha Pratim
Das

Objectives &
Outline

Inheritance in
C++

Data Members
Overrides and
Overloads

Summary

- **Derived ISA Base**
- **Member Functions**
 - **Derived** class *inherits* all member functions of **Base** class
 - **Derived** class may *override* a member function of **Base** class by *redefining* it with the *same signature*
 - **Derived** class may *overload* a member function of **Base** class by *redefining* it with the *same name*; but *different signature*
 - **Derived** class *may add* new member functions
- **Static Member Functions**
 - **Derived** class *does not inherit* the static member functions of **Base** class
- **Friend Functions**
 - **Derived** class *does not inherit* the friend functions of **Base** class

Inheritance in C++:

Member Functions – Overrides and Overloads

Module 22

Partha Pratim Das

Objectives & Outline

Inheritance in C++

Data Members

Overrides and Overloads

Summary

Inheritance

```
class B { // Base Class
public:
    void f(int i);
    void g(int i);
};
class D: public B { // Derived Class
public:
    // Inherits B::f(int)
    // Inherits B::g(int)

};

B b;
D d;

b.f(1); // Calls B::f(int)
b.g(2); // Calls B::g(int)

d.f(3); // Calls B::f(int)
d.g(4); // Calls B::g(int)
```

Override & Overload

```
class B { // Base Class
public:
    void f(int);
    void g(int i);
};
class D: public B { // Derived Class
public:
    // Inherits B::f(int)
    void f(int); // Overrides B::f(int)
    void f(string&); // Overloads B::f(int)
    // Inherits B::g(int)
    void h(int i); // Adds D::h(int)

};

B b;
D d;

b.f(1); // Calls B::f(int)
b.g(2); // Calls B::g(int)

d.f(3); // Calls D::f(int)
d.g(4); // Calls B::g(int)

d.f("red"); // Calls D::f(string&)
d.h(5); // Calls D::h(int)
```

- D::f(int) overrides B::f(int)
- D::f(string) overloads B::f(int)

Worksheet

Module 22

Partha Pratim
Das

Objectives &
Outline

Inheritance in
C++

Data Members
Overrides and
Overloads

Summary

NPTEL

Module Summary

Module 22

Partha Pratim
Das

Objectives &
Outline

Inheritance in
C++

Data Members
Overrides and
Overloads

Summary

- Discussed the effect of inheritance on Data Members and Object Layout
- Discussed the effect of inheritance on Member Functions with special reference to Overriding and Overloading

Instructor and TAs

Module 22
