Staff Salary Processing: Problem Statement

Staff Salary
Processing

C Solution

Summary

- An organization needs to develop a salary processing application for its staff
- At present it has an engineering division only where **Engineers** and **Managers** work. Every **Engineer** reports to some **Manager**. Every **Manager** can also work like an **Engineer**
- The logic for processing salary for **Engineers** and **Managers** are different as they have different salary heads
- In future, it may add **Directors** to the team. Then every **Manager** will report to some **Director**. Every **Director** could also work like a **Manager**
- The logic for processing salary for **Directors** will also be distinct
- Further, in future it may open other divisions, like Sales division, and expand the workforce
- **Make a suitable extensible design**

C Solution: Engineer + Manager

Staff Salary
Processing
C Solution

Summary

- How to represent **Engineers** and **Managers**?
 - struct
- How to initialize objects?
 - Initialization functions
- How to have a collection of mixed objects?
 - Array of union
- How to model variations in salary processing algorithms?
 - struct-specific functions
- How to invoke the correct algorithm for a correct employee type?
 - Function switch
 - Function pointers
