# Module Objectives

Module 05

Partha Pratin Das

#### Objectives & Outline

Stack in C Reverse a Strir Eval Postfix

Stack in C++
Reverse a String

- Understanding implementation and use of stack in C
- $\bullet$  Understanding stack in C++ standard library and its use

#### Module Outline

Module 05

Partha Pratin Das

## Objectives & Outline

Stack in C Reverse a String Eval Postfix

Stack in C++
Reverse a String
Eval Postfix

- Stack in C
  - Reverse a String
  - Evaluate a Postfix Expression
- Stack in C++
  - Reverse a String
  - Evaluate a Postfix Expression

# Understanding Stack in C

Module 05

Partha Pratin Das

Objectives & Outline

Stack in C Reverse a String Eval Postfix

Stack in C++
Reverse a String
Eval Postfix
Summary

- Stack is a LIFO (last-In-First-Out) container that can maintain a collection of arbitrary number of data items – all of the same type
- To create a stack in C we need to:
  - Decide on the data type of the elements
  - Define a structure (container) (with maximum size) for stack and declare a top variable in the structure
  - Write separate functions for push, pop, top, and isempty using the declared structure
- Note:
  - Change of the data type of elements, implies re-implementation for all the stack codes
  - Change in the structure needs changes in all functions
- Unlike sin, sqrt etc. function from C standard library, we do not have a ready-made stack that we can use

# Common C programs using stack

Module 05

Partha Pratir Das

Objectives of Outline

Stack in C Reverse a String Eval Postfix

Stack in C++ Reverse a String Eval Postfix

Summa

Some common C programs that use stack:

- Reversing a string
  - Input: ABCDE
  - Output: EDCBA
- Evaluation of postfix expression
  - Input: 123\*+4 (for 1+2\*3-4)
  - Output: 3 Stack states:

- Identification of palindromes (w/ and w/o center-marker)
- Conversion of an infix expression to postfix
  - Depth-first Search (DFS)

## Program 05.01: Reversing a string

Module 05

Partha Pratii Das

Objectives ( Outline

Stack in C Reverse a String

Stack in C++ Reverse a String Eval Postfix

Summa

```
// FileName: Reverse String.c
#include <stdio.h>
typedef struct stack {
    char data [100];
    int top;
} stack:
int empty (stack *p) {
    return (p->top == -1):
int top (stack *p) {
    return p -> data [p->top];
void push (stack *p, char x) {
    p \to data [++(p \to top)] = x;
void pop (stack *p) {
    if (!empty(p)) {
        (p->top) = (p->top) -1:
```

```
void main() {
   stack s;
   s.top = -1;
   char ch, str[10] = "ABCDE";
   int i. len = sizeof(str):
   for(i = 0; i < len; i++) {
       push(&s, str[i]);
   printf ("Reversed String: "):
   while (!empty(&s)){
       printf("%c ", top(&s));
       pop(&s);
```

Reversed String: EDCBA

#### Program 05.02: Postfix Expression Evaluation

Module 05

Partha Pratir Das

Objectives & Outline

Stack in C Reverse a Strin<sub>i</sub> Eval Postfix

Stack in C++ Reverse a String Eval Postfix

```
// FileName: PostFix Evaluation.c
#include<stdio.h>
typedef struct stack {
    char data [100];
    int top;
} stack:
int empty (stack *p) {
    return (p->top == -1):
int top (stack *p) {
    return p -> data [p->top];
void push (stack *p, char x) {
    p \rightarrow data [++(p \rightarrow top)] = x;
void pop (stack *p) {
    if (!empty(p)) {
         (p->top) = (p->top) -1:
```

```
void main() {
    stack s;
    s.top = -1:
    // Postfix expression: 1 2 3 * + 4 -
    char postfix[] = {'1', '2', '3', '*', '+', '4', '-'};
    int i, op1, op2;
    for(i = 0: i < 7: i++) {
        char ch = postfix[i]:
        if (isdigit(ch)) push(&s, ch-'0');
        else {
            op2 = top(&s); pop(&s);
            op1 = top(&s); pop(&s);
            switch (ch) {
                case '+':push(&s, op1 + op2);break;
                case '-':push(&s, op1 - op2);break;
                case '*':push(&s, op1 * op2);break;
                case '/':push(&s. op1 / op2):break:
            7-
        7
    printf("Evaluation %d\n", top(&s));
```

Evaluation 3

# Understanding Stack in C++

Module 05

Partha Pratir Das

Objectives & Outline

Stack in C Reverse a String Eval Postfix

Stack in C++
Reverse a String
Eval Postfix

Stack in C

 C++ standard library provide a ready-made stack for any type of elements

- To create a stack in C++ we need to:
  - Include the stack header
  - Instantiate a stack with proper element type (like char)
  - Use the functions of the stack objects for stack operations

#### Program 05.03: Reverse a String in C++

Module 05

Partha Pratir Das

Objectives & Outline

Stack in C Reverse a Strin Eval Postfix

Stack in C++
Reverse a String
Eval Postfix

Summa

```
// FileName: Reverse String c++.cpp
                                              // FileName: Reverse String.c
#include<iostream>
#include<string.h>
#include<stack>
using namespace std:
                                              int main() {
int main() {
    char str[10] = "ABCDE":
                                                  char str[10] = "ABCDE":
    stack<char> s;
                                                  stack s; s.top = -1;
    int i;
                                                  int i;
    for(i = 0: i < strlen(str): i++)
                                                  for(i = 0: i < strlen(str): i++)
        s.push(str[i]);
                                                      push(&s, str[i]);
    cout << "Reversed String: ";
                                                  printf ("Reversed String: "):
    while (!s.empty()) {
                                                  while (!empty(&s)){
        cout << s.top():
                                                      printf("%c ", top(&s)):
                                                      pop(&s);
        s.pop();
    return 0:
                                                  return 0:
```

- · No codes for creating stack
- No initialization
- · Clean interface for stack functions
- Available in library well-tested

- Lot of code for creating stack
- top to be initialized
- · Cluttered interface for stack functions
- Implemented by user error-prone

                 case '/': s.push(op2 / op1); break;
                 case '+': s.push(op2 + op1); break;
                 case '-': s.push(op2 - op1); break;
    cout << "\nEvaluation " << s.top();</pre>
    return 0:
```

## Module Summary

Module 05

Partha Pratir Das

Objectives & Outline

Reverse a Strin Eval Postfix

Stack in C++
Reverse a String
Eval Postfix

- C++ standard library provides ready-made stack. It works like a data type
- Any type of element can be used for C++ stack
- Similar containers as available in C++ standard library include:
  - queue
  - deque
  - list
  - map
  - set
  - ... and more
